CM-1100 & 2000 Series
Cast Aluminum Key Switches
INSTALLATION INSTRUCTIONS

CM-1100 CM-2000

PACKAGE CONTENTS
(1) Heavy duty 1/4" thick aluminum faceplate
(2) Tamper proof screws and driver
(1) Color coded 18 AWG soldered leads
(1) Weatherproof gasket (CM-2200 Series only)
(1) Lock ring

Note: Mortise Cylinder Sold Separately

1. GENERAL DESCRIPTION

Camden key switches are designed to work with most 1", 1 1/8" or 1 1/4" mortise cylinders, and with different types of cams. One or two switches may be installed, either momentary and/or maintained (alternating on/off).

2. SPECIFICATIONS

Input Voltage	12-24V AC/DC
Contact Rating	6A @ 30VDC (Standard), 15A @ 30VDC (Optional)
Switch Life	100,000 cycles
Temp Range	32°F - 85°F (0°C to +85°C)
Standard Finish	Brushed aluminum
Dimensions	**CM-1100:** 2 3/4" W x 4 1/2" H x 1.5" D (70mm x 114mm x 38mm) **CM-2000:** 1 3/4" W x 4 1/2" H x 1.5" D (44mm x 114mm x 38mm)

3. INSTALLATION

1. The switch (es) provided may be mounted in either the left or the right hole on the back of the faceplate. Thread the octagonal nut (spacer ring) on to the bushing (stem) of the switch before placing the switch in the hole.
2. Insert the switch up through the bottom of the desired hole. Secure the switch in place by screwing the round threaded washer onto the top of the switch.
3. Fit the mortise cylinder through the front of the face plate being sure to align the grooves on the sides of the cylinder with the corresponding "retainers" on the back of the face plate.
4. Push firmly on the cylinder, until it snaps into place, lying flush in the front of the face plate (aluminum models only). Note that some cylinders may appear not to fit in the face plate. If the grooves on the side of the cylinder are irregular and do not align with the retainers on the back of the faceplate, use a metal file to file down the retainers slightly.

Note – do not file the retainers off completely as they prevent the cylinder from spinning in the face plate.

5. Thread the brass cylinder lock ring onto the back of the cylinder, and tighten in place.
6. Turn the key in the cylinder, and ensure the cam hits the top of the switch squarely in the center. Adjust the switch in the slotted hole until the cam hits in the center. It does not affect operation of the cam if the cylinder rests against the switch, so long as the switch is not fully depressed until activated by a turn of the key. If the cam does not depress the switch, or blocks the switch from resetting, raise or lower the octagon nut located under the switch, as needed. Extra spacers are provided and may be used as required.
7. Once the electrical connections are completed (see fig 2), attach the unit to the switch box, wall, or receptacle box using the supplied tamperproof or stainless steel Phillips screws. For outdoor use, place the rubber weather proofing gasket behind the face plate prior to securing to the back box or wall.

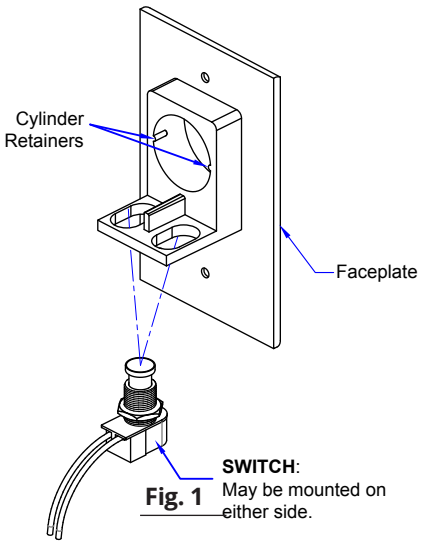

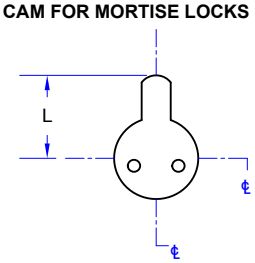

Fig. 1

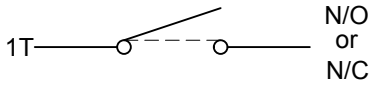

Certain operations may require different cams For this application use a standard cam with a minimum length (L) of 0.550" and maximum length (L) of 0.785"

4. WIRING

WIRING LAYOUT & COLOR CODING						
SWITCH TYPE	**1 SPST MOMENTARY N.O. or N.C.**	**2 SPST MAINTAINED N.O. or N.C.**	**3 SPDT MOMENTARY**	**4 SPDT MAINTAINED**	**5 DPDT MOMENTARY**	**6 DPDT MAINTAINED**
COMMON	BLACK	BLACK	GREY	GREY	GREY (X2)	GREY (X2)
NORMALLY OPEN	BLACK	BLACK	BLUE	ORANGE	BLUE (X2)	ORANGE (X2)
NORMALLY CLOSED	BLACK	BLACK	ORANGE	ORANGE	ORANGE (X2)	ORANGE (X2)

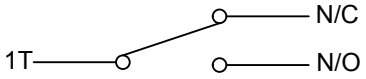

SPST

Momentary: When the switch is pressed the current pole will change to the opposite state until released.

Maintained: When the switch is pressed it will provide the opposite pole until the button is pressed again

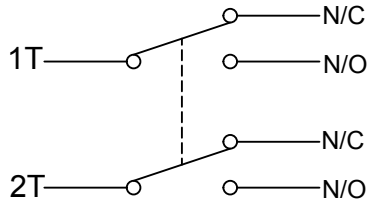

SPDT

Momentary: When the switch is pressed it will provide a change of state on the N.O. & N.C. poles until released

Maintained: When the switch is pressed it will provide a change of state on both of the N.O. & N.C. poles until button pressed again

DPDT

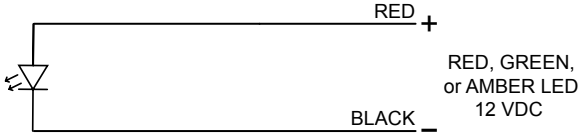

Momentary: When the switch is pressed it will provide a change of state on both of the N.O. & N.C. poles until released

Maintained: When the switch is pressed it will provide a change of state on both of the N.O. & N.C. poles until pressed again

Fig. 2

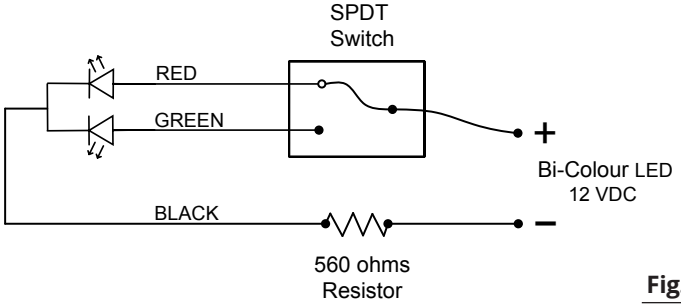

5. OPTIONAL WIRING

Key Switches may be ordered with optional LED's. These drawings show the various wiring configurations of the LED's.

NOTE:
The 560Ω Resistor is integrated with the LED.
These LEDs are designed for DC Voltage only.

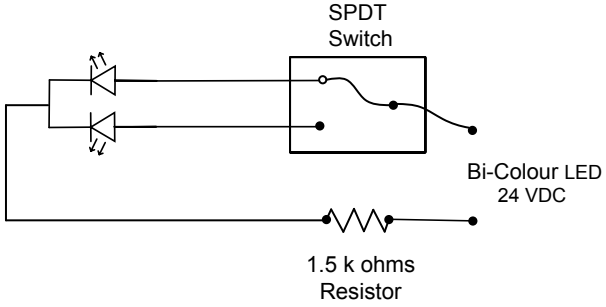

Fig. 3

6. ORDERING INFORMATION FOR REPLACEMENT PARTS

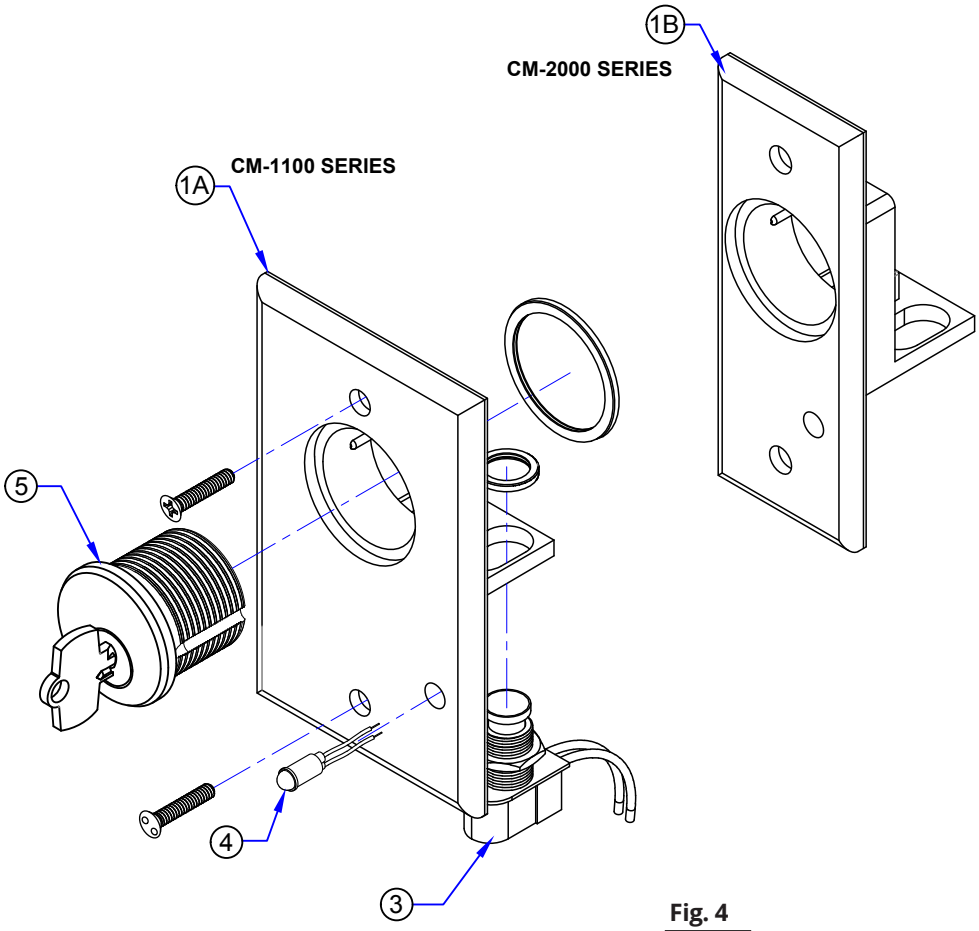

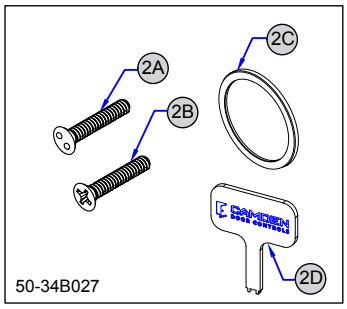

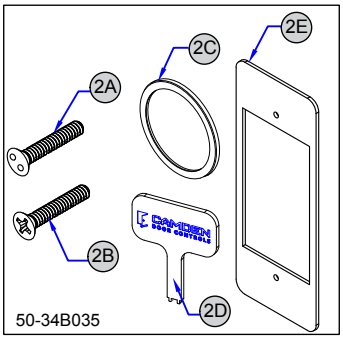

Fig. 4

NOTE:
1. CM-1100 and CM-2000 Series with option to install one or two switches (SPST, SPDT or DPDT) either momentary and/or maintained. (Refer to switch options table)
